

Deep Learning-Based High-Accuracy Detection for Lumbar and Cervical Degenerative Disease on T2-Weighted MR Images

Authors:	Yi
Publication / Venue:	European Spine Journal
Year:	2023
DOI:	N/A
Primary Source URL:	https://link.springer.com/article/10.1007/s00586-023-07641-4
Inventory Category:	DL stenosis / multi-pathology
Comparability / Priority:	High Priority: Critical

Study Details & Methodology from Literature Inventory

Study Type / MRI View:	Multicenter deep-learning detection Sagittal and axial T2-weighted MRI
Dataset & Cohort:	None (Sample: 804 lumbar patients from three hospitals)
Disease / Target:	Lumbar degenerative disease
Model / AI Method:	3D ResNet18 + transformer
Evaluation Metrics:	None
Key Finding / Relevance:	None
Thesis Context (Ch 2):	Strong multicenter evidence involving both CNN and transformer components and multiple T2 views.

Abstract / Summary
