

Detection of Abnormalities in Lumbar Discs from Clinical Lumbar MRI with Hybrid Models

Authors:	Yavuz Unal, Kemal Polat, H. Erdinc Kocer, M. Hariharan
Publication / Venue:	Applied Soft Computing
Year:	2015
DOI:	10.1016/j.asoc.2015.04.031
Primary Source URL:	https://www.nature.com/articles/s41467-022-28387-5
Inventory Category:	Early ML / CAD
Comparability / Priority:	Moderate Priority: Important

Study Details & Methodology from Literature Inventory

Study Type / MRI View:	Classification Lumbar MRI
Dataset & Cohort:	None (Sample: None)
Disease / Target:	Lumbar disc abnormality
Model / AI Method:	Hybrid machine-learning models
Evaluation Metrics:	None
Key Finding / Relevance:	None
Thesis Context (Ch 2):	Early direct automated classification of lumbar-disc abnormality.
