

Automated Detection and Classification of Lumbar Spine Degenerative Conditions Using Deep Learning

Authors:	Nish Patel, Smit Patel, Mrugendrasinh Rahevar, Krunal Maheriya, Hemant Yadav, Hiren Mewada
Publication / Venue:	IEEE conference/article
Year:	2025
DOI:	10.1109/iccad64771.2025.11099196
Primary Source URL:	https://ieeexplore.ieee.org/document/11099196/
Inventory Category:	RSNA / LumbarDISC
Comparability / Priority:	Direct Priority: Important

Study Details & Methodology from Literature Inventory

Study Type / MRI View:	RSNA-derived detection + classification RSNA 2024 MRI
Dataset & Cohort:	RSNA 2024 (Sample: 1,975 patients/studies stated in article record)
Disease / Target:	Lumbar degenerative conditions
Model / AI Method:	Deep-learning pipeline
Evaluation Metrics:	None
Key Finding / Relevance:	None
Thesis Context (Ch 2):	Challenge-derived comparator; methodological details should be checked before quoting results.

Abstract / Summary

No abstract could be retrieved automatically from open-access indexes. Full text remains behind publisher paywall; please see primary source URL above.
